

# Principal PLUS

**Principal Plus** is the newly launched High School Equivalent  
of the well-known and reputable **Principal Primary**.

- CAPS enabled
- LURITS Compliant
- SA-SAMS compatible
- Timetable
- Full School Finance
- Parent Portal App

... all you've come to love about  
**Principal Primary** – only dressed for  
High School...

The essence of the functionality, features and design has been put into a new look for **High Schools**. Although **Principal Primary** was developed and designed in a Primary school market, the distinct features required for a High School have always been part of our development plan. We are proud to say that this goal has now been achieved. We have Combined School and High School clients using our system.

Our **TIMETABLE** module is adopted from the very reputable **Smart Software** which has served schools very effectively over the last 15 years. Smart Software recently merged with **Principal Software (Pty) Ltd** and with the merger combined the skill and experience of two companies serving the education community for many years.

**Principal Plus** is thus **Principal Primary** – in a new look and feel interface. New features include a Parent Portal App and a Stock system. The features that make Principal Primary the well-loved product it is are all fundamentally the same for any High School environment.

## Our System is:

### Web-based

What is cloud computing? The concept of cloud computing is the delivery of computing and storage capacity as a service to a community of end users. This means that no application is installed on your local PC and no data is stored on site.

### Web-based benefits

- Access from any internet connection anywhere allows the user to interface with the database. (Teachers / Admin Staff can input data from work or home)
- Improved security, as data is not stored on site. Theft of equipment has no impact on one's data.
- On-line support is more
- Less capital expenditure on infrastructure is required.

### Fully integrated

Integrated systems offer various benefits. The main one being that all data linked to a specific client (learner), is stored in one database. There is one point of data entry for all common data for various modules. From a management point of view this means that a learner cannot be included in a class without the learner being linked to a fee payment option. The learner's reports and certificates draw all personal information from the central database, hence no discrepancy in spelling or other details. Finances are integrated with curriculum, discipline and communication, hence no need for separate systems.

### A complete school system

We are not a software seller. We offer a solution based on the understanding of the processes in a school environment and we enable the functionality thereof. Full school administration tools (learner and parent info, class lists, marks and reporting, discipline), full school process enabling financial tools and a communication platform to individuals, small groups of easily selected recipients and a bulk communication tool are offered.

### LURITS compliant

By law, all schools have to submit data to the LURITS Database. Principal Primary automatically integrates with LURITS and only a single click is required to upload data to the LURITS database.

### DoE reporting friendly

Principal Primary takes care of all Department of Education reporting requirements. Reports as required by the department are included in the reporting function of the software. Any new reports required are designed by our
